Summary

Computer Engineering student and full-stack web developer skilled in React, Next.js, Node.js, Tailwind, and TypeScript. Experienced with PostgreSQL, MongoDB, Docker, and real-time apps using Web Sockets. Seeking full-time front-end or full-stack developer roles with a focus on building scalable, performant web applications using React, Next.js, Node.js, and TypeScript.

WORK EXPERIENCE

Role: Full Stack Developer

InfluCon Digitals, Kolkata, India (Remote) | April 2025- Present

- Developed and maintained responsive websites from scratch, ensuring optimal performance across web and mobile platforms while aligning with client goals and improving overall user experience.
- Collaborated with senior developers on multiple projects, applying coding best practices, participating in code reviews, and using Git for version control to enhance workflow efficiency and delivery quality.
- Contributed to a 30% increase in user base and satisfaction by improving site functionality, usability, and design consistency across various client websites.

PROJECTS (MOST RECENT)

NextCode0.1 (Full Stack Website)

GitHub: github.com/ShivamIT23/nextcode0.1

Next.JS | March 2025- May 2025

- Engineered a prompt-based website builder using Gemini API, enabling 100+ users to generate sites in real time, increasing engagement by 25%.
- Implemented chat history storage, allowing users to access previous interactions, which improved usability and overall engagement.

Task Manager (Full Stack Website)

GitHub: github.com/ShivamIT23/TaskManager

React.JS with Express.JS | March 2025- Present

- Developed a task management platform enabling admins to assign tasks, monitor progress, and foster team collaboration through a streamlined interface.
- Integrated Role-Based Access Control (RBAC) and WebSocket-based real-time communication, along with a dual-approval system for secure and accountable task updates or deletions.
